

## **3 Major Questions with Regard to Enrollment**

### **1. How accurate was Decision Insite's predictive tool for boundary changes at the elementary level?**

- Decision Insite was successful (within 0.64%) in predicting district wide elementary numbers.
  - Largest variance over was SE (4.1%) and AE (3.7%).
  - Largest variance under was HH (6.3%)

### **2. What effect did Building to Building Transfers and Open Enrollment have on school numbers?**

- Building to Building transfers allowed us to meet all of our parents' requests.
- The transfers were within reasonable parameters.
- Helped lower enrollment in buildings that were approaching capacity: AE, ME, WT
- Open Enrollment was spread out over all schools with minimal impact.

### **3. What has trend data revealed regarding enrollment across the district?**

- Trend Data from the last three September 1<sup>st</sup> demonstrate that we are steadily increasing enrollment.
- Enrollment fluctuates constantly throughout the year.
